Exercise: Unit Testing

Problems for exercise and homework for the Python OOP Course @SoftUni. Submit your solutions in the SoftUni judge system at https://judge.softuni.org/Contests/1949.

In this exercise, everyone should use the source code (skeleton) written for each of the four problems (01. Mammal, 02. Vehicle, 03. Hero, and 04. Student) from the Testing exercise. You have the structure and functionality of the classes, and now you should test them. You are NOT ALLOWED to change the class. Cover the whole class with unit tests to make sure that the class is working as intended.

Submit only the test folder.
